

## laundry dosing systems

# BrightLogic Laundry

4 pump standard laundry system

BrightLogic is such a flexible system that it's ideal for small on-premises laundries and large industrial operations alike. Need one chemical dosed at a higher volume than another? Our mixed pump version will do the job. What about connecting to 'intelligent' machines, whilst still being able to operate a manifold system and record pump-cycle information? You can with BrightLogic's 'relay mode'. All units are CE, RoHS and WEEE approved.

Standard Version Suitable for:

- Small to medium-sized 'non-intelligent' commercial washing machines
- Wash load of up to 35kg

Highflow Version Suitable for:

- Larger washing machines
- Wash load of between 35kg to 100kg

formula select

### benefits include -

**Installation to any OPL or industrial machine**, with up to 10 inputs. This includes tunnel machines, clock/mechanically/card reader/PLC controlled machines.

**Diagnostic on-screen test mode** that eradicates the need for costly test equipment. Now an engineer can monitor the signals from the wash extractor to the dispensers in real time and pinpoint exactly where the problem lies, saving time and money.

**Safer handling of chemicals**, thanks to 3 manifold outputs and integral safety stops to prevent the risk of cross-contamination of alkaline, acid and neutral chemicals. An alarm also sounds if no water is present, but can be snoozed for 30 minutes with a button press.

**More security** and less hassle as the Prime, Pump-Stop and View modes can be disabled.

**Absolute control of flow** is also available thanks to the speed control on all the pumps, which enables one pump system to suit all your needs
